shark	_____	_____
rock	_____	_____
owl	_____	_____
water	_____	_____
sand	_____	_____
snake	_____	_____
lizard	_____	_____
house	_____	_____
camel	_____	_____

Ecosystems

Concept: An ecosystem is all the living and non-living things in an area.

What You Need:

- paper
- pencil, pen, or marker

What You Do:

- Make a chart like this on your paper:

My Ecosystem			
Living Things	How Many?	Non-living Things	How Many?

- Go to an open space outside (garden, park, school playground).
- Look at everything around you.
- Record everything you see on the chart.
- Compare your chart with a friend's chart.

What You Should Notice:

There are many things in an ecosystem. Some may be the same as those on your friend's chart.

Explanation:

Explain how one living thing and one non-living thing interacted in your ecosystem.
